

The only mobile drug testing device that gives instant results with lab accuracy

Protzek is a biotech company specialized in the research, has over 16 years of experience in the development, production and sales of complete solutions for accurate drug detection.

With branches in Germany, Switzerland and France, and affiliated sales partners in Austria, Italy and the United States, we've built our success on strong values: continuous innovation, excellent support, trend-setting products and extensive knowledge in toxicology.

P.I.A.2 is the only Point-Of-Care multi-drug testing device capable of performing quantitative analysis. Combining cutting-edge R&D, security and precision, P.I.A.2 is a versatile system for daily use anywhere, anytime.

Certifications and awards:

- DIN EN ISO 9001:2008
- DIN EN ISO 13485:2012
- "Made in Germany" certification which ensures that the manufacturing takes place in Germany

Results in
ng/ml

P.I.A.2 can detect qualitatively and quantitatively up to 21 parameters including, but not limited to:

Amphetamine, benzodiazepines, cannabinoids, ecstasy (MDMA), cocaine, methadone, methamphetamines, opiates, secobarbital, phencyclidine, morphine, nortriptyline and others.

2 ways of testing: qualitative or quantitative testing, it's your choice

P.I.A.2 quant – delivers the result as a quantitative value, indicating the concentration in ng/nl.

P.I.A.2 select – delivers the result as Positive/Negative value (only for urinary testing)

P.I.A.2 main advantages:

- No specialized training required to use it;
- Works with multiple types of samples: urine or saliva, blood, substance and contamination;
- P.I.A.2 performs metrological analysis for the presence of illicit drugs on surfaces and in unknown substances.
- Reduce the false positive test results;
- The analyser system is comparable in accuracy to the laboratory method.
- Mobility: P.I.A.2 works on a network adapter or an accumulator;
- Seamless recording and printing capabilities – instant data storage, on various devices;
- It also helps to observe the substitution, by identifying the presence of substitutes in urine.
- Automatic measurement: automated sample analysis that takes only a few minutes and returns a result in ng/ml;
- Easy handling – small weight: pocket format
